The stock exchange of Brands

An e-marketplace where customers become investors with the Shopping Bonds: alternative investment instruments (also on Blockchain, as NFTs) that increase in value over time and can be spent at partner brands' e-commerce and brick-and-mortar stores. The software allows partner companies to publish and customize their shopping bonds, do in-store adv, and collect their earnings in real-time. The payment system enables secure and intuitive use across all sales channels. Apps, with integrated wallets, ensure a smooth shopping experience and constant monitoring of sales and purchases.
