

SYTRAMA

RoboLine S.r.l.

Who we are

Our company finds place in the world of plastic and mechanics as a supplier of Cartesian robots, linear axes and automation solutions. Roboline Sytrama has the goal of becoming a leader in the design and construction of robots with Cartesian axes, offering quality products at competitive prices. During these 30 years, the company has therefore evolved to be an important alternative to the world leaders in the construction of robots and automation.

Product description

The robot range has been designed to operate with injection moulding machines from 40 to 6,000 tons. In addition to the plastic sector, our robots find application in tooling machines, assembly lines and in “pick and place” operations. Furthermore, our technical department is at the disposal of the customer, both end user or integrator, to study proper technical solutions to its specific needs.
