

An hassle-free micromobility service for the communities of tomorrow.

By partnering with hotels, residential compounds and corporate campuses through its flexible solution, Unicorn Mobility delivers software-enhanced mobility experiences to the end users.

Hardware and Software as a Service. Unicorn Mobility offer both HW and SW. In particular, our vehicle include e-bikes and e-scooter and are managed through an APP mobile and a Partner Dashboard

Business Model:

Hospitality: pay per use from the end user (guest of accommodation), plus a minimum contribution fee from our Hotel Partners

Corporate: corporate partners pay a subscription fee for the vehicles and a SaaS fee depending on how many users will access the micro-mobility service

Residential: same of Hospitality.

Depending on the partner, they can also rent the vehicles from us and retain a larger share of the revenue.
